

# KATT

## Modular Access Ladders

## **KATT modular access ladders are an extremely versatile range of permanent, vertical fixed ladders.**

**KATT** ladders can be used at angles from 75° to vertical and can be supplied complete with fall arrest cages and landing platforms.

The system has a unique, precision design, which ensures a high level of safety and confidence for maintenance personnel.

The lightweight, high-strength, aluminium design provides safe and easy installation with non-corrosive, industrial-rated system performance.

### **Applications**

- **Safe access from the ground to roofs and elevated areas**
- **Safe access between varying roof levels**
- **Safe access to rooftop machinery and equipment platforms**

### **Easy delivery**

The lightweight components are delivered as a flatpack kit, which ensures easier handling and significant savings on freight costs. The components can be simply manhandled to the required location or crane-lifted once at destination.

### **On site assembly**

Each ladder is provided with all necessary fasteners and attachment hardware. By cutting the lower ladder body to the required length, the system can be built to suit exact site requirements.

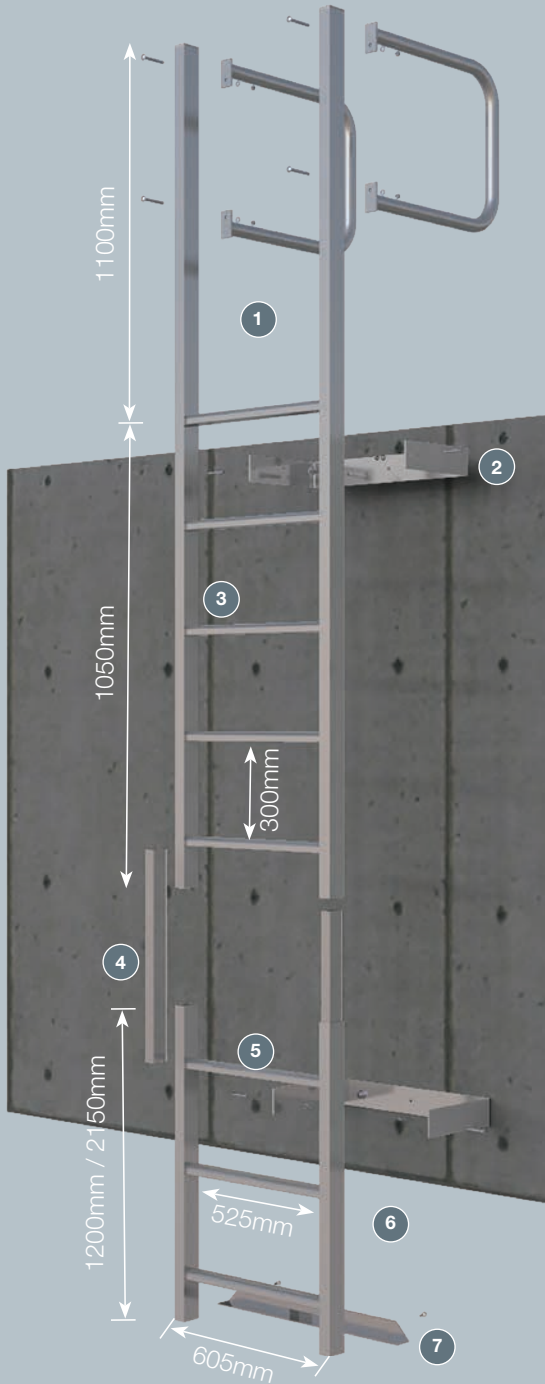

### **Safe and easy to use**

The wider ladder body and unique, profiled, non slip rung design ensures increased user confidence and safety.

### **Compliance**

**KATT** ladders are manufactured to comply with the relevant British Standards **EN ISO14122-1:2016 & EN ISO14122-4: 2016**.

# The KATT principle

Top rung level with walking/working surface

- 1 Ladder head module**  
Easy and safe step through
- 2 Ladder attachment bracket**  
Various sizes to suit different applications
- 3 Precision welded rung assembly**  
High-strength, neat appearance
- 4 Splice join**  
For easy joining of modules
- 5 Profiled rung 50mm x 35mm**  
Anti-slip, comfortable to climb
- 6 Ladder body module**  
Add or cut to achieve required height
- 7 Ladder base support**  
For roof/floor mounted ladder applications

Cut on site to achieve required height
